

Industry AI Flow

AI-powered construction intelligence — search building codes, predict cost overruns, and analyze project data with full privacy.

Angel Bustamante | Jason Niu | Jack Si

Instructor: Reeta · SAIT

! The Pain Point

Construction teams spend **hours manually searching** through thousands of pages of building codes, safety manuals, and specs. Answers are slow, scattered, and error-prone.

✓ Our Solution

VS

A private **AI-powered platform** that understands construction documents, predicts cost overruns with ML, and generates data insights — all running on local hardware for complete privacy.

1 Three Core Capabilities

PRIMARY FEATURE

RAG Knowledge QA

Upload building codes and ask questions in natural language. Hybrid search (BM25 + pgvector + RRF) with cross-encoder reranking and cited answers.

ML + EXPLAINABILITY

Cost Estimation

CatBoost + Ridge dual model on 10K remediated projects. SHAP TreeExplainer shows top-5 cost drivers. What-if scenarios and similar project lookup.

CODE GEN + SSE

Dynamic Data Analysis

Upload any dataset — merged AI prompt generates analysis + visualization in one call. 6-node SSE pipeline with PII detection and Docker/E2B sandbox.

2 Product Architecture

Three AI capabilities powered by one intelligent router

PRIMARY FEATURE

RAG Knowledge QA

- 1 Hybrid Search (BM25 + pgvector)
- 2 Cross-Encoder Reranking
- 3 LLM Cited Generation

Cited Answers

Source references + groundedness check

ML + EXPLAINABILITY

Cost Estimation

- 1 CatBoost + Ridge Dual Model
- 2 SHAP Top-5 Cost Drivers
- 3 What-If + Similar Projects

Cost Intelligence

Overrun prediction + SHAP waterfall

SSE PIPELINE

Data Analysis

- 1 PII Detect + Metadata Extract
- 2 Cloud LLM Code Generation
- 3 Docker Sandbox Execution

Charts + Insights

6-node SSE real-time streaming

Privacy by Design

| PII Detection + Metadata-Only Cloud

| Local LLM (Ollama Metal GPU)

| Docker + E2B Sandbox
